		the drawings,	sheets:								

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/EP 03/11820

5. 🗆	This report has been established as if (some of) the amendments had not been made, since they have
	been considered to go beyond the disclosure as filed (Rule 70.2(c)).

(Any replacement sheet containing such amendments must be referred to under item 1 and annexed to this report.)

6. Additional observations, if necessary:

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N) Yes: Claims 1-63

No: Claims

Inventive step (IS) Yes: Claims 1-63

No: Claims

Industrial applicability (IA) Yes: Claims 1-63

No: Claims

2. Citations and explanations

see separate sheet

Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

- 1. The following documents are referred to in this communication; the numbering will be adhered to in the rest of the procedure:
 - D1: BAKRE A V ET AL: "IMPLEMENTATION AND PERFORMANCE EVALUATION OF INDIRECT TCP" IEEE TRANSACTIONS ON COMPUTERS, IEEE INC. NEW YORK, US, vol. 46, no. 3, 1 March 1997 (1997-03-01), pages 260-278, XP000685987 ISSN: 0018-9340
 - D2: US 2002/036991 A1 (INOUE ATSUSHI) 28 March 2002 (2002-03-28)
 - D3: PATENT ABSTRACTS OF JAPAN vol. 2002, no. 11, 6 November 2002 (2002-11-06) & JP 2002 209028 A (MITSUBISHI ELECTRIC CORP), 26 July 2002 (2002-07-26)
 - D4: EP-A-0 903 905 (TOKYO SHIBAURA ELECTRIC CO) 24 March 1999 (1999-03-24)
 - D5: US 2002/045424 A1 (LEE HEE DONG) 18 April 2002 (2002-04-18)
- 2. The subject-matter of claim 1 meets the requirements of novelty and inventive step (Art. 33(1)-(3) PCT):
- 2.1 D1, belonging to the same field of internetworking in heterogeneous network environments as the application, is considered the closest prior art.
 - **D1** discloses, in the terminology of claim 1, a gateway for forwarding transmission information between a first terminal node of a first network and a second terminal node of a [second wireless] network, comprising a transmission/reception unit adapted to receive transmission information from said first terminal node and to transmit said transmission information to said second terminal node and an acknowledgment information detection unit adapted to detect the receipt of acknowledgment information from said second terminal node. (*)
 - (*) TCP connections (e.g. indirect-TCP connections in D1) imply receiving

- acknowledgement information at the end devices and at the intermediate gateway device, since TCP is a connection-oriented transport protocol.
- 2.2 Claim 1 differs from **D1** in that the second wireless network is an *ad-hoc* network and in that the gateway comprises tunnel setup means arranged to establish a tunnel between the gateway and the mobile node within the ad hoc network in order to exchange acknowledgement information (claim 1, step c). Said acknowledgement information within said ad hoc network is arranged to be provided to the gateway in order to identify safe receipt of transmission information.
- 2.3 The objective problem starting from **D1** is how to perform flow control more reliably and efficiently in the case where gatewaying to an ad-hoc network is involved, so that handling of different addressing schemes is supported. This problem is solved by the invention as claimed in claim 1.
- 2.4 Although D1 teaches the implementation of an indirect transport protocol via an intermediate gateway device in order to attain improved transmission performance, the transmission problems in ad hoc network environments and the establishment of a tunnel between different elements are neither disclosed nor suggested in D1. Furthermore, none of the remaining documents cited in the Search Report (D2-D5) disclose or suggest the a.m. distinguishing features in relation to the collection of accurate control information in an ad-hoc network. Therefore, an inventive step must be acknowledged to the subject-matter of claim 1.
- 3. The subject-matter of independent claims 29, 35, 36, 62 and 63 meets the requirements of Art. 33(1)-(3) PCT:
 - These claims are corresponding since they are related to the operation of the gateway on the one hand (claim 35) and to the operation of a terminal according to the invention on the other hand (claim 36), as well as to the corresponding terminal device (claim 29) and gateway and terminal software (claims 62 and 63). Thus, lack of unity is not jeopardized and the reasoning in the previous point also applies to the subject-matter of these claims.
- 4. The dependent claims further limit the independent claims and likewise meet the

requirements of Art. 33(1)- (3) PCT.
